

Project KINDS

Knowledge is not dynamistic secrecy

Proofing our very ancient ancestors

To quote Charles William Johnson

“The analytical work of Carl P. Munck, ***The Code***, covering several volumes now, reflects the numbers of the ancient reckoning system in relation to a pyramidal matrix of the ancient sites around the world. The mathematical procedure followed by Mr. Munck represents a method for computing the pyramidal structures in relation to one another, whereby the coordinates of one site determine and relate to the other sites on the matrix. The implications of Mr. Munck's work are far reaching. If the numerous pyramidal sites around the globe are relational to one another through a mathematical and geometrical matrix, then a conclusion might be forth-coming that the distinct structures of many different cultures are in fact related through conscious design. Such a conscious design would imply a more profound and unified origin for the different structures than has usually been suggested by academia.

Undoubtedly, many theories exist as to the origin of the numerous ancient societies and cultures; theories that suggest uniquely distinctive origins, and theories that suggest a common origin for many of the cultures. But, to discover a direct and exact mathematical-geometrical relationship among all or most of the pyramidal-like structures around the globe defies the idea of chance. It is difficult to believe that *each and every one* of the smallest/largest pyramidal-like structures are of the same grid system. Somewhere, someone must have built a structure that lies outside the scope of the all-encompassing design. And yet, the very fact that so many ancient societies came up with the exact same idea, of simply building pyramid-like structures, in its self seems to contradict the idea of coincidence. Why should almost all of the ancient societies have come up with the same or similar idea of building pyramids and pyramidal-like structures out of stone. The building material, stone, seems to be a reasonable choice, given its very presence. But, the conceptual design idea of high-rise pyramids somehow baffles the mind into comprehending why so many distinct ancients happened upon that same/similar idea.

Now, with the work of Carl P. Munck, not only may we observe seemingly dissimilar pyramidal-like structures as being related through the number of elements conceived and expressed in their shapes, stairways, cornerstones, etc., but we may observe how the placement of the structures appears to obey strict mathematical-geometrical posits. Furthermore, these specific posits may be expressed in concrete numbers; numbers, which in some cases even reflect those of the ancient reckoning system of *time*. Therefore, we are observing, as we have attempted to point out in previous essays, how the ancients handled the relationship between space and time. The ancient reckoning system and its mathematical-geometrical expression appears to have been expressed quantitatively, in numbers, and qualitatively, in artistic design.”

This presentation is an educational tutorial to prove a science based on a math system that has been re-discovered **by Carl P Munck** and with the recent work of **Michael L Morton** and others.

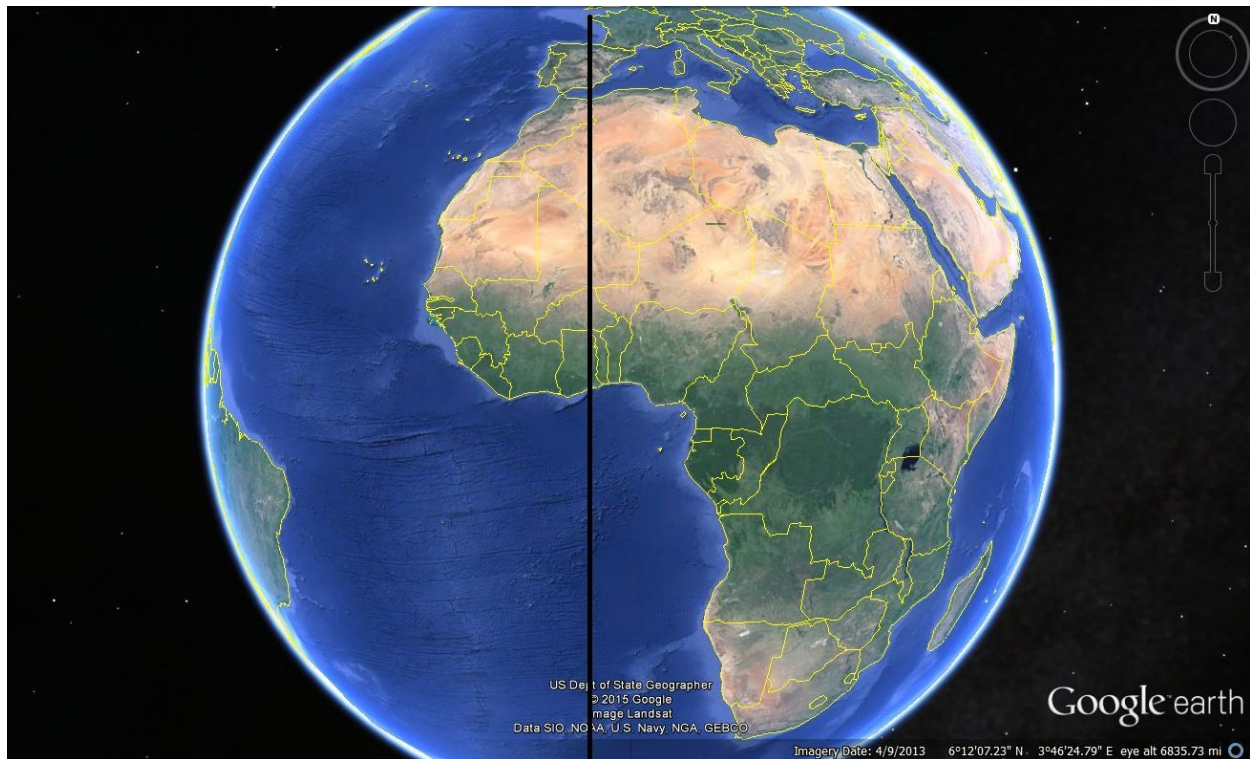

The why, when, where, who and how they did this is answered through this mathematical matrix and recent discoveries

Lesson 1

Understanding Greenwich/Prime Meridian, Latitude and Longitude

Without question now, we know that our very ancient ancestors had knowledge of global positioning systems down to a fine art. In order to understand the cryptology hidden – yet seen in their earth works and structures all over Earth, we need to learn their language – the language of radian based mathematics on a global array.

Figure: 1.1 – Earth, Africa

The black line seen in figure 1.1 represents our modern arbitrary Greenwich/Prime Meridian of Longitude. Cartographers both modern and ancient use the equator as their 0°0'0" Latitude.

This must be conceived as a visual aid now in order to understand the offsets Carl Munck explains however we'll establish soon enough why and where our ancient ancestors placed their Greenwich/Prime Meridian. It is interesting to note at this point <enter name here> who said "Life started in Africa".

Figure: 1.2

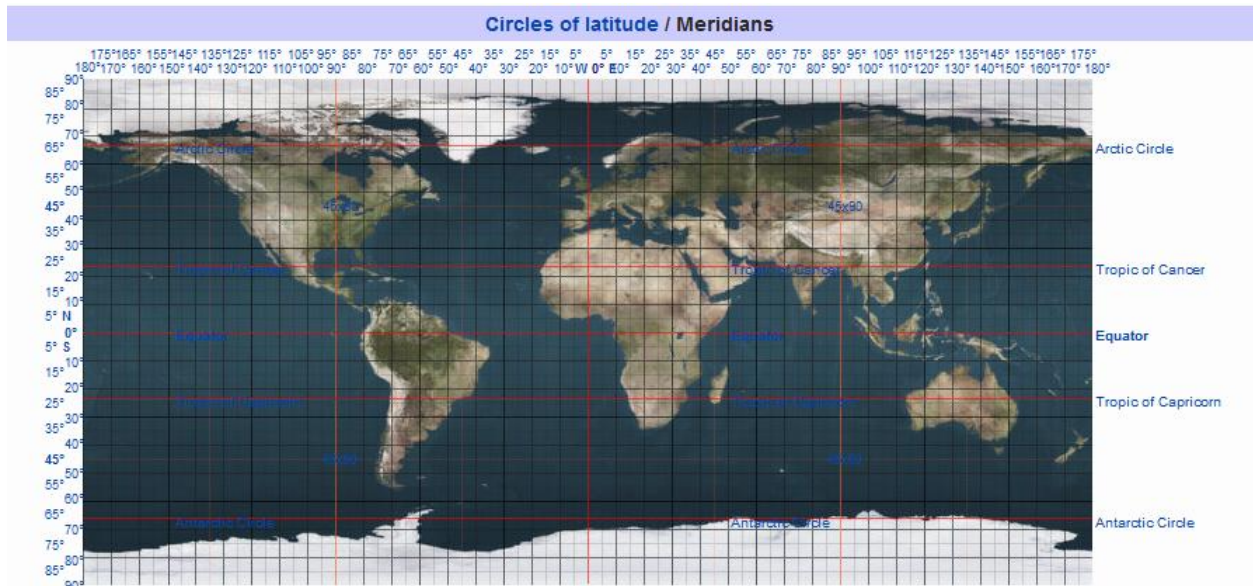

Figure 1.2 shows us modern day Longitude Greenwich/Prime Meridian seen at 0° middle of the top running north and south (up and down) while the 0° latitude is seen at the left hand side half way up on the picture. 0° Latitude as known as the equator and runs through the upper part of South America and the middle of Africa going left to right.

Figure: 1.3

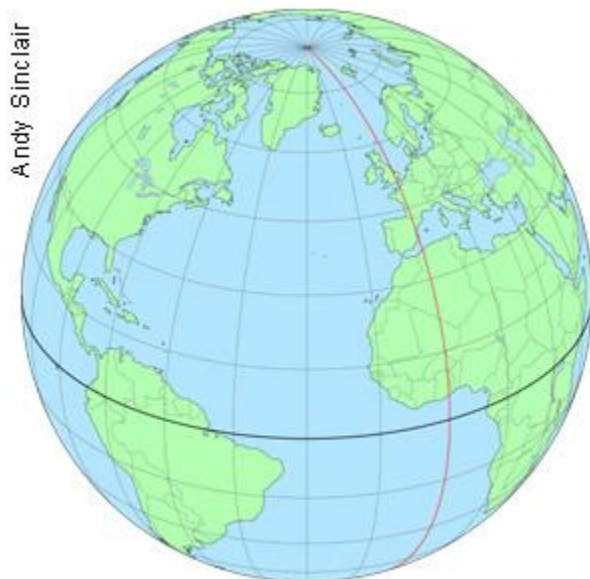

Figure 1.3 show us the spherical representation Red Line represents 0°/360° Longitude Greenwich/Prime Meridian. Black Line represents 0°/0° Equator/Latitude. 0°/360° Longitude passes through the northwest part of Africa running north and south to the polar south and polar north of Earth.

If you haven't watched "Carl Munck The Code" video series or read his books or even visited his website (which is down at the moment – March 6th 2015) I'll save you the time by incorporating his discoveries and years of work as we go through Project KINDS. I'll be referencing other people's work based on their own calculations, Carl Munck's work as well decoding our ancient ancestor's cryptic global array of structures and earthworks. This decoding process proves that our ancient ancestors had global positioning systematic sciences down to a fine art – and they prove this through their structures, earth circles, earthworks and much more. I have no doubt like what Carl Munck states that there is a multitude of layers of knowledge within the geodetics they left for us. I have again no doubt we'll soon find solutions to alternate forms of mathematics, new forms of energy, secrets of the geometric forms, understanding how sound can be used as energy (right Nikola Tesla?) and much more all through understanding what our ancestors left us.

They're many great earth circles found on Earth and on several continents located in areas that many have wondered why they are built where they are. There is no need to guess anymore why these structures are built precisely where and why they are. No need to make up one's own theory on such a geometric form or structure. I'm not here to tell you that you need to open up your mind to this or to believe in this – no, I'm here to show you what was left here on Earth through mathematics and science for all to see and learn from.
